The late W.L. Minckley, Professor of Life Sciences, Arizona State University, Tempe, amassed an extensive reprint library during his four-decade-long professional career, and the goal of this project was to make that library, exclusive of books and journals, available on-line in searchable format to end users. The library is populated by more than eleven thousand documents relevant to partners and participants of the Lower Colorado River Multi-Species Conservation Program (MSCP), to fishery and aquatic professionals throughout the southwestern United States, and to interested parties around the country and the globe. The project was funded jointly by Bureau of Reclamation, Phoenix Area Office, Glendale, Arizona (Robert W. Clarkson, COR) and the MSCP, administered through Bureau of Reclamation, Boulder City, Nevada (James Stolberg, COR). Brian R. Kesner was Marsh & Associates Project Manager, and Erin M. Mills and Jeffrey A. Cooper performed the tedious physical and electronic tasks necessary to translate the paper reprint library into accessible PDF format. The library is available for use without cost at www.nativefishlab.net. Please notify us via email at library@nativefishlab.net if you encounter difficulty or detect any errors or omissions, and we will do our best to provide a remedy.
